Abstract (en)

[origin: WO2006027268A1] Disclosed is a supporting component (10) for assembling an inductive element. Said supporting component (10) comprises a base (1), on the top face of which a protrusion (7) is embodied for accommodating the inductive element (9). A recess (11) is provided in said protrusion for receiving an electronic component and/or a ferrite element. Also disclosed is an interference suppression coil device encompassing a supporting component that is provided with a protrusion which is used for accommodating an interference suppression coil. The invention further relates to a method for producing an inductive component that is to be mounted on a printed circuit board.
