Abstract (en)
[origin: EP1792834A2] A hand-held vessel (10) has a bottom wall (12), and sidewall (14) and a supportive strap (16) attached to the bottom wall (12) and the sidewall (14). The strap (16) has a first end (38) and a second end (40), whereby the first end (38) is fixedly attached to the sidewall (14) and the second end (40) is selectively secured to the bottom wall (12). The strap (16) is adaptable to accept a user's hand disposed between the strap (16) and the outer surface of the sidewall (14). The strap (16) urges the hand against the outer surface of the sidewall (14) to secure the vessel (10) to the hand and stabilize the vessel (10) with respect to movement relative to the hand.
