Abstract (en)

A container (1) for perishable products comprises a tray (2) delimited by a base (3) and lateral walls (4) which together surround a cavity (5) for receiving products; the lateral walls (4) have a top edge (6) which runs continuously along the container (1) border; the container also comprising a shell-shaped annular element (7) which is associated by overlapping with the top edge (4) of the lateral walls (4) and which has a continuous, smooth exterior surface (8) designed to constrain to it a container (1) airtight sealing barrier (9). The exterior surface (8) of the shell-shaped annular element (7) has a groove (10) along it, running without interruption along the top edge (6) of the container (1) and dividing the exterior surface (8) into two strips (11, 12) on either side of it, the strips being designed to constrain the airtight sealing barrier (9) independently of one another.
