Abstract (en)
A method of acoustic feedback suppression, comprising the steps of:- i). obtaining digitized time-domain samples of acoustic signals, ii). performing discrete time-frequency transformation on the digitized time-domain samples to generate a plurality of frequency bins of a frequency resolution, iii). identifying a howling frequency bin, said howling frequency having the maximum magnitude among the plurality of frequency bins, iv). detecting a peak frequency within said howling frequency bin for suppression, and v). suppressing said peak frequency.
