Abstract (en)

[origin: WO2006034820A1] Disclosed is a fastening arrangement for detachably fixing the forward end of the sliding rail (16) of drawer draw-out guides to an associated drawer by means of a fastening mounting (10) which can be mounted on the drawer at the forward end of the sliding rail (16) facing the front cover, "forward" being in relation to the direction of extraction. Said fastening mounting comprises a housing (18) in which the free end of a spring-biased locking protrusion (24) that is movably guided within the housing is mounted so as to engage into an elongate locking receiving device (30) that is provided in the sliding rail while being retractable from said locking receiving device counter to the spring bias. The housing (18) of the fastening mounting (10) is disposed on the bottom face of the drawer bottom (12), directly next to the sliding rail (16). The locking protrusion (24) that engages into the locking receiving device in the facing wall of the sliding rail is provided with a bordering edge (28) in the area that protrudes from the housing (18) and points in the direction of extraction of the sliding rail. Said bordering edge (28) extends regularly, runs at an angle from the direction of extraction, and is urged into contact with the forward end of the locking receiving device in the appropriate locked position, "forward" once again being in relation to the direction of extraction.
