Abstract (en)

[origin: WO2006037458A1] The invention relates to electronic devices containing organic semi-conductors, whereby the halogen content is less than 20 ppm. As a result, the service life and the efficiency of the corresponding electronic devices is increased, and said materials are more suitable for the use in organic electronic devices than materials having a higher halogen content. The invention also relates to corresponding organic semi-conductors and a method for the production thereof.
