Abstract (en)
[origin: WO2006008518A1] A protective device for a glazed structure, in particular an aircraft windscreen (20), comprises at least one removable sacrificial sheet of transparent composite (10). The composite (10) comprises a transparent polymeric film (11) having on one side an electrically conductive layer (12) formed from a dispersion of electrically conductive particles and which is coated with a transparent hard coat (13), with the other side having adhesive layer (14) thereon. Sheets of the composite (10) may be arranged in a stack so that each sheet adheres to the adjacent underneath sheet with the uppermost sheet of each stack being removable as the sheet becomes damaged and/or dirty.
