Abstract (en)
[origin: WO2006035175A1] The machine comprises a main fixed frame (1), housing several working positions, each position comprising: on the upper part, a supply unit (A), for textile material and, on the lower part, a spinning and twisting unit (R), in alignment and corresponding with the above. The supply unit (A) has means for a vertical displacement, in a plane essentially parallel to that including said units (A) and (R), corresponding to a height adjustment with relation to the spinning unit (R), in order to permit a concomitant loading and unloading of bodies (2, 3) for said supply unit (A) with a lowering movement (lower level (15)) and/or to provide an adjustment of the textile on adjusting the upper level (14), corresponding to a working position.
