Abstract (en)

[origin: WO2006030134A1] The invention concerns an assembly for making railings comprising at least one panel optionally prefabricated consisting of an upper profiled section and a lower profiled section and of one or several filling element(s) between said two parallel profiled sections and at least two structures of poles designed to be assembled with the opposite ends of said panel or of two adjacent panels and to secure said panel(s) to the ground. The assembly is characterized in that the structures of poles (6) comprise each at least one indentation or notch (7) having a cross-section corresponding to that of the lower profiled section (4), each panel capable of being assembled with two structures of posts or poles (6) through double-nesting of the profiled sections (3 and 4) respectively in the corresponding adapted indentations or notches (7 and 8) of each pole structure (6), optionally after suitable length-cutting of the panel(s) concerned (2) by cutting the two profiles sections (3 and 4).
