Abstract (en)

[origin: WO2006037287A1] The invention relates to a communication device, especially a mobile telephone, which further simplifies inputting of data into said communication device. The disclosed communication device uses information that is made available on the communication device in an integrated manner in data, e.g. image data. Said communication device comprises an identification unit for determining the information integrated in the data while being provided with at least two different modes of operation and a control unit by means of which the communication device can be switched at least from a first mode of operation to another mode of operation.
