Abstract (en)  
[origin: EP1795281A2] A permanent chill mold comprises a mold tube (1) placed in water box, where a water gap is formed between inner side wall of water box and outer side (2) of mold tube; and sheet metal water deflector(s) (3) situated in the water gap. The mold tube is supported in one direction to be laterally freely shiftable with respect to the water box, and the working position of the mold tube is adjusted by flow relationships in the water gap. A partial area of the outer surface of the mold tube is provided with cooling channels (7). The deflector has a diversion section (10, 11).
