Abstract (en)

[origin: EP1795345A1] The device has a heating cylinder (26) and a cooling cylinder (24) between which, a release foil (34) and a substrate (18) comes in transmission contact. A control cylinder (50) is provided, which is moved with respect to the heating cylinder, so that the contact position (K) is changeable between the release foil and the heating cylinder. An independent claim is also included for a method for transferring color or varnish by a release foil on a substrate by a heating cylinder and a cooling cylinder between which, the release foil and the substrate comes in transmission contact.
