Abstract (en)

The cylinder (3) has a cylinder core (3.1), and an adapter cover (4) that is attached on the cylinder core. The cover is formed such that printing forms in the form of sleeves or printing plates are fastened by a printing process depending on size of printed copies. The sleeves are implemented as endless sleeves or as sleeves with a welded joint. The pressure plate has bevels, which are attached in clamping channels of the adapter cover, where the channels are shifted to each other based on a periphery of the cover. An independent claim is also included for a method for operating a roller printing machine.
