Abstract (en)

[origin: EP1795480A1] The reel has two flanges (2, 3) connected to each other by a core or a drum (4), where the flanges are disintegrated from the core or drum with a dismountable structure. A spacer (5) of the core or drum is fixed to one flange in a removable manner at a level of each end (5') of the spacer. A reception unit of the spacer is placed at a level of an inner side of the flange, where the reception unit is made in a form of nozzle or spacer portion. An independent claim is also included for a method of mounting a reel with simultaneous installation of crowns or bobbins of tube or cable.
