Abstract (en)

The lifting system has a foot (20) mounted to a transportation system that moves downward during assembly of a transportation system structure (10) and a foot cradle (220). The foot has a foot surface (22) and the foot cradle having a supporting surface arranged complementarily to the foot surface. The supporting surface is vertically movable to change positional height and vertical adjustment of the transportation system structure. Independent claims are included for the following: (1) transportation system cradle for cradling a transportation system structure; (2) an intermediate product comprising a transportation system cradle and a transportation system structure; (3) an assembly planned for pre-assembly and manufacturing assembly of transportation systems; and (4) method for the assembly and manufacturing assembly transportation systems.
