Abstract (en)
[origin: EP1795667A2] The unit (1) has two reinforced bars (2), which extend respectively like a spiral around a longitudinal axis (4), where the longitudinal axis is curved. The reinforced bars are interweaved with other reinforced bar. The reinforcement unit is circumscribed in a cross section perpendicular to the longitudinal axis in essentially circular, oval and rectangular cross section. The reinforced bars consist of fiber reinforced composites. An independent claim is also included for a method for producing a supporting form work.
