Abstract (en)

The device has a sealing strip (1) for bridging a gap between an embrasure (4) and a frame (2) that is insertable into the embrasure (4) of a building. The strip is connected with the embrasure along an end region running in a longitudinal direction of the sealing strip. The sealing strip has a plug-in profile (14) for connection with the frame along an opposite end region of the sealing strip. The plug-in profile has a plug-in part (140) for latch-insertion into a groove (20) at the frame. The sealing strip is adhesive-free connected with the plug-in profile. An independent claim is also included for an application of a sealing strip of a sealing device.
