Abstract (en)

Equipment (1) for supplying chilled fluid to an installation (100) for air conditioning an environment (2) comprises means (6) for supplying chilled liquid at a first temperature ( $T_1$ ) to radiant panels (7), in which the value of the first temperature ( $T_1$ ) is such that the temperature of the inner surfaces of the environment (2) is kept above the dew point ( $T_{dr}$ ) of the air present in the environment (2). The equipment (1) also comprises second supply means (8) for supplying chilled fluid at a second temperature ( $T_2$ ) to a heat exchange element (9) positioned within the environment (2), in which the value of the second temperature ( $T_2$ ) is such that the temperature of the heat exchange surface of the heat exchange element (9) is kept below the dew point ( $T_{de}$ ).
