Abstract (en)

[origin: EP1795978A2] The clock has a housing (1) whose interior (2) has an opening that is closed by a cover glass. A sound opening (3) provided in a base side of the housing is closed by a diaphragm (10). The diaphragm is closed by its radial circumferential edge region at a corresponding ring surface of the housing. A vibration generator is arranged in the interior of the housing, and a radial circumferential edge of the diaphragm is tensile loaded radially outward by a tension device.
