Abstract (en)
[origin: EP1795979A1] The timepiece has a fixed external case (1) in which a tiltable internal case (10) is articulated by the action of a spring to an inclined position. A locking/unlocking mechanism comprises a movable covering element which is manipulated on a plane of a rotational bezel (20) of the internal case provided with a toe (22) that is engaged into a slot (2) of the external case. The toe is provided in the form of a L and has a small arm oriented towards the exterior for cooperating with the slot whose length is selected for permitting the rotation of the bezel between two positions.
