Abstract (en)  
[origin: US2008269780A1] A motor-driven epilation head, and epilation apparatus for use therewith, The epilation head has a rotatable cylinder operable to turn about an axis of rotation. The rotatable cylinder includes clamping devices operable to take hold of and pluck the hairs and actuating elements operable for actuating the clamping devices. The rotatable cylinder has at least one pressure element with a control surface that is at least intermittently contacted by the actuating elements in a sliding fashion. The actuating elements as well as the pressure element are made of a plastic material.
