Abstract (en)
[origin: WO2006008383A1] The inventive box comprises a body (12) in which a support (18) for a recipient (16A) is arranged. In the body (12) of the box, said support (18) divides a space (G) for arranging the recipient (16A) from a space (R) for arranging at least one accessory (P1, P2, P3). The arrangement space (G) at least partially covers the arrangement space (R). In the preferred embodiment, the support (18) comprises at least one orifice (24) coverable at least partially by the recipient (16A). Said orifice (24) forms an access to means for separating the recipient (16A) from the support (18). The recipient (16A) can be embodied, for example in the form of a cap for the make-up product.
