Abstract (en)

[origin: WO2006012770A1] The invention relates to a multi-chamber ampoule, comprising a housing (1) with a longitudinal axis (L), at least one bypass (3), embodied on the housing (1), at least one front and one rear piston (4, 5), which can engage with the housing (1) in a sealing manner outside the vicinity of the at least one bypass (3) and which may be displaced along the longitudinal axis (L). The rear piston (5) comprises at least one material (8), which can project into the bypass (3) when the rear piston (5) is in the region of the at least one bypass (3).
