Abstract (en)

[origin: WO2006023478A2] The present invention relates to a method of playing a game in which a guess is made of a number value of a remainder. A total point value is determined from game pieces given to a player. A number value of a remainder is determined by dividing the total point value by a predetermined divisor. The number value of the remainder is compared to the guessed number value of the remainder. If the number value of the remainder is the same as the guessed number value of the remainder, the player wins. In one embodiment, a bonus one or more bets can be placed on guesses of a last remaining remainder value determined upon continuation of the game, guesses of a value or a range of values of the total point value used for obtaining the last remaining remainder value or guesses of a value of a number of subsequent game pieces given to a player before the last remaining remainder value is determined.
