Abstract (en)  
[origin: WO2006021199A1] The invention relates to a decorated injection-moulded article, and a method for producing a decorated injection-moulded article by means of inmould technology. According to the invention, an IMD transfer film (1) comprising a peeling layer (12) consisting of highly cross-linked plastic is used. The formed decorated injection-moulded article has a high optical quality, by means of injection moulding, based on a double-sided coating of a decorative element which is optionally joined to an auxiliary film strip (2), formed by a transfer layer of a transfer film and decorates the injection-moulded article.
