Abstract (en)
[origin: US2005199694A1] An elongate, rectangular box (16, 60, 80) and method for packaging containers (C), wherein the box can be cross-stacked for stable stacking of the boxes, and optimizes utilization of pallet space. Containers (C) are placed in the box in diagonally offset relationship to one another in a parallelogram-shaped arrangement, and interior corner inserts (14,15, 61,62, 81,82) are placed in the boxes to form diagonal interior corner panels extending across two diagonally opposite corners of the box, defining an interior box shape closely conforming to the parallelogram-shaped arrangement of the containers. The inserts also define structure that supports one box on top of one another when the boxes are stacked. The box is especially suited for packaging four one-gallon containers.
