Abstract (en)
[origin: WO2006037141A1] The invention relates to a staircase provided with a lining consisting of step plates (3) fixed to the footrest (2) of steps (1) and of stair riser plates (5) disposed in a stair riser area (4) which are maintained with a lower edge section disposed between the stair riser area (4) of the steps (1) and the respective adjacent lower step plate (3) and are covered in a top marginal area (14) by a marginal downwardly protruding element (16) of the respective top step plate (3). In order to obtain a good fastening conditions, the stair riser plates (5) are inserted into an U-shaped upwardly open holding profile (6) by the lower marginal section thereof, wherein said profile is fixed to a leg (8) on the step side in the stair riser area (4) of the steps (1) and overlaps the adjacent lower step plate (3) with the bent covering flange (10) of another leg (9).
