Abstract (en)

[origin: WO2006027619A1] The present invention relates to a device for controlling the temperature of a fluid by heating and/or cooling. It has a reciprocating, displacement type pumping arrangement (12, 14) which propels fluid from an outlet (34) to an outlet (36) via a conditioning chamber (40, 40') in which fluid temperature control is carried out by means of a thermo-electric heat pump (50, 50') which is preferably of Peltier type.
