Abstract (en)
[origin: WO2006034928A1] The invention concerns a sensor (SE) consisting of single-crystal and piezoelectric material (1) for measuring pressure (6) in an internal combustion engine combustion chamber, comprising a pressure-transmitting pin. Said pressure-transmitting pin is in the form of a preheating pencil (4) slidably mounted and projecting into the combustion chamber and the sensor (SE) is force-closed to the preheating pencil (4). The sensor (SE) is preferably placed between the preheating pencil (4) and a fixed stop (5). The single-crystal piezoelectric material (1) of the sensor (SE) is advantageously lithium niobate (LiNbO₃)
