Abstract (en)
[origin: WO2006029745A1] The invention relates to a security document (1) with a transparent window (12), inside of which a first optical element (15) is placed, and with a second transparent window (13), inside of which a second optical element is placed. The first transparent window (12) and the second transparent window (13) are, while being interspaced, placed on a support (11) of the security document (1) whereby enabling the first and second optical elements (15, 16) to be superimposed. The first optical element (15) has a first transmissive microlens field and the second optical element (16) has a second transmissive microlens field, a first optical effect being produced when the second microlens field is overlapped by the first microlens field.
