Abstract (en)
[origin: WO2006039876A1] The invention relates to a device for potential separation, which can be integrated into the core hole of a toroidal core (44). Said device comprises a central part (1) having a rotational axis, and outwardly extending sections (21, 22, 23) that can be deformed in the rotational direction (62) about the rotational axis. Said sections comprise a preferably radially extending insulating region (31, 32, 33), on the end thereof opposing the central part (1), that is thicker than the sections (21, 22, 23) themselves.
