Abstract (en)

[origin: WO2006040486A1] The invention concerns a device for monitoring a motor vehicle alternator capable of determining the regulating voltage (Vreg) of said alternator based on the vehicle life situation, said device comprising means (10) for acquiring a plurality of variables (P %, Vit, Acc, I, R, E, M/A) representing the current situation of the vehicle, assessing means (20) for determining whether the vehicle is in a plurality of predetermined life situations, and regulating means (30) for determining the alternator regulating voltage (Vreg) based on the predetermined life situation in which the vehicle is.
