Abstract (en)
[origin: EP1797788A1] The epilator has a coupling section (3), and an epilator roller (4) at which circumference clamping units are provided. The units are reciprocated between clamping and non-clamping positions by an operating device. The device is switchable by a switching device between partial operating position in which a part of the units is reciprocated and full operating position in which all the units are reciprocated between the positions.
