Abstract (en)
The toy is displaceable in one or more directions by means of commands of radio-electric orders coming from a wireless control device (1, 5) which includes a radio-control module (4) with antenna (3) and general on/off switch (2). Said orders are activated by the user by means of a position sensor module (6) connected to the said radio-control module (4), in such a way that when the actual control device (1, 5) is moved in space the displacement of the toy is determined and controlled, according to the movements of the device (1, 5).
