Abstract (en)

In a machine for applying partially adhesive bands (2) to respective products (3), each band (2) presents a first face (2a) provided with at least one glue zone (38) and a second face (2b) essentially free from glue zones (38), and is advanced in a folding station (15), at which the band (2) is essentially U-folded about a respective product (3), by a first and a second belt conveyors (51, 52) presenting respective conveying branches (53b, 58a) able to engage the first and, respectively, the second face (2a, 2b) of the band (2) itself; the conveying branch (53b) of the first belt conveyor (51) being a toothed conveying branch.
