Abstract (en)  
[origin: EP1798813A1] The method involves pivoting a waveguide (32) around its longitudinal axis (36) for determining a position such that shifting of propagation plane of a polarized transmitted electromagnetic field by the waveguide is limited. The determined position is marked on the waveguide, and the waveguide is assembled on a reflector based on the mark. The shifting is determined using a transition guide (34) between a circular section of the waveguide and a rectangular section. Independent claims are also included for the following: (1) a radiocommunication antenna comprising a reflector connected to a sub reflector through a waveguide (2) a device intended to assemble a radiocommunication antenna.
