Abstract (en)
[origin: EP1798814A2] An antenna comprises: a main reflector being a body of revolution of arbitrary curve which axis diverges from axis of the revolution; a sub-reflector being a body of the revolution of arbitrary curve along the axis of revolution, having a circle and a vertex pointing to the main reflector and being placed between the circle and the main reflector; a radiator being located along the axis of revolution and being placed between the main reflector and the sub-reflector; and wherein the main reflector and the sub-reflector are: $z = m \cdot r \cdot \frac{\pi}{D} \cdot D = \frac{\pi}{2} n \cdot D$, $m = 0.6 \cdot q_m$, $n = m \cdot \frac{r}{D}$, $r = \sqrt{n^2 + D^2}$, $q_m = \frac{r}{D}$, D is the main reflector diameter measured in millimeters, n is the index of refraction of the main reflector, m is the index of refraction of the sub-reflector, r is the distance between the main reflector and the sub-reflector measured in millimeters, z is the position of the radiator measured in millimeters.
