Abstract (en)

[origin: WO2006039929A2] An actuator, preferably for adjustable articles of furniture, is activated by a wireless control (14) having an IR-transmitter (15). The IR-receiver (15) is incorporated in a control (18) cabled to the control unit. Hereby, the actuator may be still activated even if the wireless control (14) is not functional or is temporarily lost. As a particular user-friendly and cost-reducing feature, the cabled control having the IR-transmitter is configured similarly to the wireless control, i.e. with the same cabinet and keys.
