Abstract (en)

[origin: WO2006029989A2] The invention relates to a double packaging storage assembly (5) for an aqueous medical solution, especially for a contrast medium, comprising a packing (4) in which at least one flexible packaging recipient (3), which is filled with an aqueous solution and sealed by means of a connector fitted with a cap, is packaged and hermetically sealed. In the storage assembly (5): the packing (4) comprises two superimposed layers made of flexible or semi-rigid polymer materials, the first layer being transparent over its entire surface and the second layer being opaque over its entire surface, and; the packaging recipient (3) comprises two superimposed layers made of a polymer material, and comprises an access member at the distal end of which the connector and the cap are situated, the connector making it possible to seal the packaging recipient after filling it with the aqueous solution.
