Abstract (en)  
[origin: WO2006023692A2] A folded pizza box is formed from a lay flat blank for retaining, transporting and serving hot pizza. The blank includes an arrangement of end panels, side panels and lid panels foldable relative to a bottom panel such that, in the erected box, the lid panels overlap and are interlocked with the end panels by frictionally engaged detents. The side panels slant upwardly and inwardly from the bottom panel to add rigidity and save material for the carton. The end panels flare upwardly and outwardly from the bottom panel to prevent shifting of stacked boxes. The lid panels each have less width than the bottom panel and do not extend completely across the width of a box erected from the blank.
