Abstract (en)

[origin: WO2006036105A1] The present invention concerns a loader comprising two arm constructions (2a, 2b) arranged parallel to each other, and which in turn constitute extended arm sections (3, 3a) and parallel struts (7) arranged above the extended arm sections (3, 3a). The invention is characterised in that each parallel strut (7) is constituted by an extended beam construction with an open cross-section demonstrating a longitudinal opening (Y) directed towards the arm section (3, 3a).
