Abstract (en)
[origin: WO2006040293A2] The invention relates to a dosing dispenser for dispensing a product in a toilet bowl comprising a fixing area for fixing said dosing dispenser in a toilet area, in particular under a toilet lid and a reservoir for a product. Such dosing dispensers create a problem when a product is inexactly and invariably dosed. Said invention makes it possible to solve the problem by the fact that the reservoir is constructed in such a way that it receives pre-portioned products and an output device makes it possible to dispense at least one pre-portioned product from the reservoir in the toilet bowl.
