Abstract (en)

[origin: WO2006011843A1] A roof ladder (1) is distinguished in that each tread (4,5) has a first stepping surface (T1), the extension of which being adapted for use when the roof ladder (1) is positioned with a first end directed upwardly along the roof and the general plane of the roof ladder forms an angle inside a first interval with the horizontal plane, and that each tread has a second stepping surface (T2), the extension of which being adapted for use when the roof ladder (1) is positioned with a second end directed upwardly along the roof and the general plane of the roof ladder forms an angle inside a second interval with the horizontal plane. The invention also concerns a method for producing a roof ladder.
