Abstract (en)

[origin: WO2006040302A1] The invention relates to a method and a device for controlling a drive unit, which permit a reproducible damping of the load impact. To achieve this, a target value (S) for an initial variable of the drive unit is delimited in such a way that an overrun fuel cut-off is prevented. A limit value (G) is formed for the target value (S) for the initial variable, in accordance with a loss value (V) of the drive unit.
