Abstract (en)

[origin: EP1645807A1] The burner (1) burns low calorie, in particular synthetic, gas (SG). Its air channel (2) contains a swirling element (4) to create turbulent combustion air (10). The swirling element should preferably be in a region (28) directly adjacent to the mixing region (27). The degree of turbulence of the air flow is increased on a microscopic scale directly before it is mixed with the synthetic gas.
