Abstract (en)

[origin: WO2006026673A2] Disclosed herein is an architecture for building and managing data integration processes. The architecture may provide modularity and extensibility to many aspects of the integration design process, including user interfaces, programmatic interfaces, services, components, runtime engines, and external connectors. The architecture may also employ a common integrated metadata sharing approach throughout the design process to enable seamless transitions between various phases of the design and implementation of a data integration process.
