Abstract (en)

[origin: WO2006041694A2] A method and system for submitting from an electronic device multimedia data captured by the electronic device to a web application in a server includes providing a user interface in the electronic device through which the web application is accessed and enabling the user interface to detect and identify a multimedia capture event originating from the electronic device. After such an event is detected and identified, the user interface automatically processes multimedia data captured during the multimedia capture event, and transmits the multimedia data to the web application.
