Abstract (en)

[origin: EP1800818A2] The present invention relates to a method for forming a panel that has rows of partially embedded elements (4), wherein the elements (4) are laid in rows separated by a spacer on the bottom of a mould (1), and the assembly is subsequently covered with a mortar (7), said mortar (7) setting to yield the panel. The invention is characterized in that at least one longitudinal side of a row of elements as the spacer a hollow flexible hose (2) is used, and the mortar (7) is applied in a state of the hollow hose (2) where it is in close contact with the longitudinal sides of the elements, and the mortar (7) is subsequently set.
