Abstract (en)

The invention relates to an entrance arrangement for an entrance opening of a building, comprising an automatic door with at least one door panel (4) which is movable between a closed position and an open position and which, in the closed position thereof, prevent passage through the entrance opening and in the open position allows passage through the entrance and a second passage regulating means (10) movable between a closed position and an open position which, in the closed position thereof, prevent passage through the entrance opening and in the open position allows passage through the entrance; whereas a screen (9) is arranged being movable between a first position, in which the screen (9) leaves the entrance opening essentially clear, and a second position, in which the screen is present at the interior side of said at least one door panel. The present invention also relates to an entrance module comprising said entrance arrangement and a building provided with said entrance arrangement or entrance module.
