Abstract (en)  
The device has a slide (12) mounted movably in translation on a support, where the slide is displaced longitudinally with respect to the support in rest position and two active positions. Rapid contact break micro-switches (20, 22) has respective control knobs (24, 26) that are displaced vertically between the rest position and the respective active positions. The control knobs are maneuvered by co-operation with a cam profile (56) that is arranged on the slide so that the rest and active positions of the knobs depend on the positions of the slide. An independent claim is also included for a module comprising a connection unit.
